

Dr Hadi Saleh is a physician specialising in preventive medicine and advanced preventive diagnostics. Having spent ten years as managing director of a medical technology company, he combines medical expertise with an entrepreneurial mindset and a particular focus on the early identification of individual health risks.

At his private practice in Berlin, he supports patients through a personalised approach to preventive medicine. At the same time, he is active in the field of advanced preventive diagnostics at Nexus Precision Diagnostics. Acting as a medical guide and trusted point of coordination, he develops individual prevention strategies and, where necessary, coordinates further diagnostic procedures and treatment with a network of carefully selected specialists.

His approach combines advanced diagnostics, data-driven analysis and the potential of artificial intelligence to identify health risks at an early stage and develop personalised prevention strategies.

As the author of *Mission Gesundheit* and host of the podcast of the same name, Dr Hadi Saleh advocates a fundamental shift in the way medicine is understood and practised. His key areas of expertise include prevention, longevity, healthcare innovation, and the use of data and artificial intelligence to shape the future of personalised medicine
